

## PACKING

"SKIF TECHNOLOGY GROUP" develops and implements advanced packaging technologies that ensure high dosing accuracy, fast packaging, and ease of handling products in bags and big bags. Our solutions are suitable for both automated and semi-automated packaging processes, reducing packaging time and increasing overall productivity and efficiency.

Our packaging systems are designed for a wide range of bulk materials, including grains, sugar, compound feeds, pellets, charcoal, nuts, and coffee. We consider the specific features of each product type and offer customized solutions to optimize packaging processes.

## ADVANTAGES OF OUR PACKAGING SOLUTIONS

1

**Flexibility and versatility** — Our systems allow packaging in bags up to 50 kg and big bags, making them adaptable for products of varying volumes and sizes. Whether you are packaging small quantities for retail or large volumes for industrial use, our solutions cater to all.

2

**High dosing accuracy** — Equipped with advanced dosing technology, our systems offer exceptional precision, which eliminates product overrun and ensures minimal waste. This results in significant cost savings and maximized product yield.

3

**Process automation** — The automation of the packaging process reduces the need for manual labor, improving efficiency and reducing human error. Automated systems ensure consistent and reliable packaging, increasing productivity while lowering labor costs.

4

**Compatibility with different loading types** — Our packaging systems are designed to work with both mechanized and manual loading/unloading systems, ensuring maximum flexibility. This makes them suitable for a wide range of production environments, from small workshops to large-scale manufacturing plants.

5

**Increased operational efficiency** — With optimized workflows and minimal manual intervention, our systems significantly reduce downtime, improve throughput, and ensure continuous production, even under high-demand conditions.

## COMBINED PACKAGING LINE

Our combined packaging lines offer a complete, turn-key solution for businesses looking to streamline their packaging processes. These lines integrate multiple components that work together seamlessly, providing an efficient and high-performing system.

The line includes:

- 1 Storage hopper with the option to increase its volume by adding additional sides to enhance storage and dosing processes.
- 2 Various options for hanging big bags, which can be done either using a forklift or a lifting device (hoist), providing flexibility in equipment choice.
- 3 Conveyor system for fast transportation of sewn bags to storage areas, increasing operational speed and reducing downtime.
- 4 Slide gates that allow for precise manual dosing of product from the hopper, ensuring high accuracy during packaging.
- 5 Valves for big bags that ensure safety and convenience when working with large containers, preventing contamination or product loss.
- 6 Automated or manual bag-sealing mechanisms, which can be selected based on business needs, providing flexibility in the production process.

Switching between packaging into big bags and standard bags takes only a few minutes, making the line convenient and cost-effective.

## CUSTOMIZED APPROACH

At "SKIF TECHNOLOGY GROUP", we understand that every business has unique packaging needs. That's why we offer a customized approach to every project. Our experts work closely with you to assess your specific production conditions and develop a tailored solution that fits your requirements. From initial consultation and system design to installation and support, we ensure that our packaging lines meet your exact specifications.

Before installation, our team conducts an in-depth analysis of your production environment, considering factors like product types, throughput requirements, and space constraints. Based on this analysis, we recommend the best packaging solutions that deliver maximum efficiency, reduce costs, and increase productivity.

Whether you are a small business looking to improve your packaging operations or a large-scale manufacturer aiming to streamline your processes, "SKIF TECHNOLOGY GROUP" provides reliable, scalable, and innovative packaging solutions that will support the growth and success of your business for years to come.
