

DUAL-VENT

DUAL-VENT

The DUAL-VENT stands out as the definitive solution for mitigating the risks and mitigating the consequences of BESS thermal runaway. Unlike other products on the market, it uniquely conforms to both NFPA 68 and 69 standards, ensuring unparalleled safety and compliance. Moreover, it offers a highly cost-effective investment option compared to less efficient alternatives. Notably, since the implementation of the 2023 version of the 855 standard, the inclusion of explosion vents on BESS is mandatory, further emphasizing the indispensability of the DUAL-VENT system.
