

VIGISPACE

VIGISPACE

The VIGISPACE, is designed to mitigate collateral damage. By restricting the opening angle of the explosion vent and directing the release of pressure, flame, and heat upwards, the VIGISPACE prevents the spread of explosions and fires, safeguarding buildings, vehicles, and personnel. This innovation not only reduces the hazardous area but also optimizes the available space in your installations, ensuring maximum protection against explosions. The VIGISPACE is compatible with VIGILEX VL or VD systems.
